RADTriage dosimeters in Israel

Dear Gordhan,

It has been two year since the purchase order of 8,000 RADTriage units by the Israeli Ministry of Defense. As you remember, the units were purchased for first responders in Israel. This means that these dosimeters have been field trialed in Israel for this time period. We are happy to inform you that up until now we did not receive even a single complaint concerning these dosimeters.

Given their superb performance in the field and their hailed technical achievements as indicated by the national reference laboratory in Israel, we have high confidence that the Ministry of Defense are satisfied with the RADTriage Cards, and we anticipate that a new purchase order will arrive in the future, possibly as soon as the current stock becomes expired.

PrevenTech

As your distributors in Israel, we are also carrying the RADTriage cards (from the batch that was prepared for the Ministry) in our wallets, exposing them to sun light, and presenting them to potential customers. Up to date, they are not expired.

We will update you as soon as we hear back from the ministry.

Sincerely yours,

Dr. Guy Robin, CEO
